## **Abstract**

Natural factors are the main elements of the primary touristic offer in Bjeshkë të Nemuna, concentrated in natural attractive and natural recreational in this environment, by motivating bigger amount touristic benefits.

It is also worth mentioning that even though Bjeshkë të Nemuna are situated in three countries' territorial ground, the touristic motives that are situated in environment interact with each other and together they manifest a relatively big touristic territory, that could be among the most important touristic point in Balkan peninsula and wider.

Various number of geo-morphologic touristic motives located at Bjeshkë të Nemuna which also possess two or more attributes which creates the opportunities for development a touristic complex ground such as: Gryka e Valbones, Gryka e Rugoves, Thethi, Boga, Gryka e Decanit. But in the same environment there are other motives which are not in a satisfactory level of attraction and are being used as additional motives of the other motives that are introduced as a complementary motives.

The touristic environment Bjeshkë të Nemuna are aligned among the highest forest with geo-morphologic touristic motives of the high level, they are the most attractive forests for tourists not only in the Balkan peninsula but even wider. On this essay we will make the: identification, cartography and touristic geo-morphologic evaluation, even though it is a relatively complicated issue.

The result of identification of highlighted motives is the preparation of specific list with touristic motives of Bjeshkë të Nemuna, where the touristic evaluation review will be conducted, the list that subsequently could be served for the level of the value that they possess.
