Abstract

Educational or learning technologies are anything that extends our ability to teach and learn. The process of learning has changed over the years. Nowadays are being used more and more techniques and applications, which affect the improvement of this process. Software technology is developing increasingly in this area. Techniques can be divided as: e-learning, hypermedia, web mining and reaching out to those we call intelligent systems.These tools are those that we call facilities in the process of learning. Technologies are any technique, material, or device that extends human abilities. E-learning describes teaching and learning methods that are supported by the use of technology. This include: accessing information online; communication tools and multimedia; online assessment ecc. An advantage of e-learning is the increased opportunity for dialogue it offers to students and teachers, which in turn enhances the learning experience.
