## **Abstract**

The textbook's language is the mainstream through which the new generation acquires the literal language and gains a sound training as well as a good linguistic culture. The submission of the main roads, designed by the science of linguistics with the clearance scope from the terms and words borrowed is a requirement of the identity and purity of the language as well as a meaningful indicator of crystallization of literal language. The replacement of the unnecessary foreign words with appropriate words in Albanian language and the enrichment processing of scientific terminology used in physics textbooks of secondary education is the main objective of this article. The proposed paper encompasses a detailed research and analysis over the a/m texts that are previously and recently approved by the Ministry of Education and Science. In a comparative context for the analytical purposes were used the terminology dictionaries of some branches of physics, chemistry, mathematics, the albanian vocabulary and the etymological dictionary.

**Keywords:** *physic textbooks, scientific terms replacement.*
