Abstract

I will treat at these article titled “Music therapy, Broca’s and Wernicke’s Dispfasia and Aphasia”.1.What is Broca’s and Wernicke’s Dispfasia and Aphasia? 2.How music therapy and scenic speech influence at improving these disorders? Dysphasia is a partial or complete impairment of the ability to communicate resultingfrom brain injury.The term "dysphasia" is more frequently used by European health professionals, whereas in North American the term, aphasia is more commonly preferred. Dysphasia and aphasia both refer to the full or partial loss of verbal communication skills due to damage or degeneration of the brain's language centers. Dysphasia does not necessarily prevent proper cognitive function, so the patient can think and feel with perfect clarity. This can be extremely frustrating for the patient, as they cannot express these thoughts and feelings to others.Dysphasia can occur in a variety of forms, depending on how the communicative disruption manifests.

Key words: *dispfasia, music therapy, broca, aphasia*
