Abstract

The municipality is characterized by a rich biodiversity with natural potential for tourism development. Tourism sector is a priority for our municipal strategy and his interest for devepoping is growing and has the support local and central goverment . Tourism development is an opportunity which will awaken and liven the potentials in the field of agriculture, farming, handmade products and crafts . Those opportunity this municipality has thanks to its geographical position and its natural conditions, such as: climate, relieve, hydrography, flora and fauna that is to rich and distinctive. But it is not exempt from problems about the nature, activity antopogjene and lack of management. Where the study of alternatives should be done as soon as possible, for management and administration of the municipality's natural resources ,with the support of the city hall of Fier, because so we serve the sustainable development of the municipality, it is not only local study but beyond. . In this work is clearly drawn, not only for natural potential of for municipality, its environmental problems, but also the necessity of regional cooperation of common problems, to minimize those problems in the context of sustainable economic development and tourism.

Key words: *management, collaboration, administration.*
