### **Abstract**

The continued economic growth, the modification of Albanian legislation in harmony with European legislation as well as the crises which has affected the world economy increased the number of returns migrants (and voluntary returns) despite of the reasons of leaving the country. Naturally the questions such as: are we able to face this steam? Do we have the “welcome” conditions? Do we have the supported legislation on facilitating this process? Do we have the human resources able to guarantee this process? are the questions that encouraged me choosing this topic. Using the qualitative method helped on comparing the changes on our legislations as well as highlights the importance of social worker as changes agent and mediator on re-integration process. Analyzing the presence and indication of the social workers on realizing a long - term and sustainable re- integration process is another step taken on realizing this paper. The results of this research are helpful for teachers of social studies at high school as well as enforcements of social politic on local level in order of re - seeing the role of social workers on treating the returns migrants. The need of lobbying on presence and necessity of the social workers role as an important institution on re - integration process of returns migrants was one of the key findings of this search. The focus of lobbying consist on: finding the possibilities, the space for expiation services for social workers on re integration process; increasing skills on finding the supported and facilitated instruments on creating the positive model in society for a collaborative awareness in community; Creating spaces influential on central and local institutional level as well as combined them with activities of non - government institutions; the high level of quality on implementing the social services in time or space.
