Abstract

Natural factors are the main elements of the primary touristic offer in “Bjeshkë të Nemuna” mountains, concentrated in natural attractive and natural recreational in this environment, by motivating bigger amount of touristic circulations/benefits. It is also worth mentioning that “Bjeshkë të Nemuna” mountains are situated in west side in three countries’, Albania, Montenegro and Kosovo, and are rich in the hydro-geographical touristic motives of a relatively high touristic level that are related with each other and together they manifest a relatively big touristic territory, that could be among the most important touristic region in Balkan peninsula and wider. A larger number of hydro-geographical touristic motives located at “Bjeshkë të Nemuna” mountains which also possess two or more attributes that create the opportunities for development in a touristic complex/resort such as: “Drini i Bardhë”, Peja’s “Lumbardh” Deçan’s “Lumbardh”, “Ereniku” etc. But in the same environment there are other motives which are not in a satisfactory level of attraction and are being used as complementary touristic motives. The touristic environment “Bjeshkë të Nemuna” mountains are aligned among the highest mountains with hydro-geographical motifs in Kosovo territory, motives that are of the high level and that are attractive for tourists. On this paper work has been done the: identification, cartography and evaluation of hydro-geographical touristic motives, by knowing its qualitative and quantitative components. The result of identification of highlighted motives is the preparation of specific list with hydro-geographical touristic motives of “Bjeshkë të Nemuna” mountains in Kosovo where the touristic evaluation review will be conducted, a list that should be served for the level of the value that they possess.

Keywords: *“Bjeshket e Nemuna”, hydro-geographical touristic motives/motifs, waterfall, glacial lakes, artificial lakes*
