Abstract

Theme reflects treatment as an effort of the authors, on the basis of their work supported by research in books, magazines, journals and materials published widely in the Internet, for themes related to general developments in the world for Information Society and for the similarities and specifications of Albania, and Kosovo constantly doing their updates and seeing the trend of these developments. This paper aims to present problematic of development of Information and Communication Technology in those two developing countries. Treatment was done in the main divisions that include: The internet in the world and in Albania & Kosovo some point of view for development of information society that is linked with general development of those countries that is presented from historical view to problematic one together with new ideas for further realizations of projects. General development of the internet gives us the opportunity to understand developments in both countries, and wide treatment of tables and graphs that reflect these developments, together analyzing their trends as well as elements of ICT. Statistics of Internet users are another opportunity to have a more complete view of these developments and the ability to make appropriate conclusions. ". Achievement, realities in the new developments of e readiness of organizations is another problematic of this theme. A special aspect, treated is accompanying theme, whenever relevant elements associated with costs of Internet services, and this gives us the opportunity to have an even more comprehensive overview. Although we tried to treat specific, Internet and society, but their mutual relationship has led to often treated as elements of Information Society. Review of country achievements in different fields in those countries especially in education, give us possibility of reflections on the program of digital country, along with ideas, and new projects expected to be realized in the field of ICT.
