Abstract

Technology and toddlers, ways of introducing explanations of words in the active vocabulary by children. At the center of this paper are childish world, in cooperation with technology, and the role played by the latter in vocabulary enrichment of children aged 3-5 years, by adjusting the experiences of Albanian children. Through our material, we will be able to highlight the terminology of technology obtained from children of this age, also will address ways in which these children cope with the world advanced technology. In the development of infantile vocabulary enrichment, plays a major role digital world, ranging from new computer, iPod, playstation, videogames other digital tools that have become part of life of many families and many children, in particular. Toddlers are recognized at an early age with the computer and its component parts screen, keyboard, mouse and carpet, which may be taken as part of the vocabulary of children up to age 5 years. Children aged 3-4 years, were able to use the computer, ask their favorite toys commonly found on various web sites that offer games for them as: Y8, Y3, mini clips, etc.. Also, children of this age are able to use other elements of technology as Play Station 2, which determine the names in foreign languages, as well as listen to derive and enrich their vocabulary with them. There you can find games for younger ages as Stuart Little 2: a mouse who struggles to gain points and these points it can pass from one level to another, to win the game. Vocabulary that enters the lives of children usually obtained in a foreign language, but small mouth treats in the best ways possible to age skills.

Keywords: *technology, vocabulary, computer, screen, keyboard, mouse, language development*
