Abstract

The way technology affects the education system; this used to be the main incentive for this study that still aims to reveal which are the extent of it in our schools and the use of it. On the other hand, we think that many things have changed with the use of modern technology. To clearly reflect the ideas, doubts and our hypothesis about technology, we decided to achieve our study in some of Tirana's district schools. We think that the directors of the schools, teachers as well as students and parents too can help us find an answer about the reality and which is the impact of this reality. The findings, conclusions and recommendations coming out from this study will be a good help for education and technology in our schools today. Also the data and findings of the study will serve as DAR leading institutions in improving the quality of technology in schools. The development of technology caused a real explosion of information nowadays which still came together with the increase of knowledge's. The use of technology in education can improve the motivation of students and increase the interest behavior towards the environment, but could this technology make students be addicted to it, could this technology make them forget the traditional pen and paper and even worse, make them to forget writing by hand? Given the outcome of our study, the use of technology today gives a good help in the process of teaching and learning, but we should very careful of not becoming completely dependent on it.

Keywords: *Technology, education system, the impact of technology.*
