### Abstract

Nowadays public services in Albania are facing many challenges. So the main purpose of this paper is the analysis of the change process which is taking place in the public services sector. This study aims in implementing new information and communication technologies (ICT) to change the operation of the public administration. These will have a great impact in highlighting the importance of transparency, efficiency and the fight against bureaucracy of public administration activities, as principles recognized by the Albanian legislation and also EU integration criteria, that find their practical implementation through this process. Also in this paper will be analyzed the role and the contribution of information and communication technologies in e – law. Applying these chances to the public administration will require also the using the ontologies in e – law environment. In realization of this paper, the main aim was not only the realization of the theoretical analysis that will be based on the legal texts in order to reach conclusions and recommendations that are often accessible to a small part of society or only for professionals. Our target of this study is to bring a comprehensive article, work based on analysis, and also to illustrate these analyses with best practice experiences and to use these experiences as reference models to rely on.
