Abstract

Judicial statistics is a very important discipline. This is because in developed countries, statistical information is a powerful tool that serves to present complex facts clearly and match them in space and time. Judicial Statistics occupies an important place in the great community of statistics collected and processed known, studied and compared crime and the criminal justice system at the national, regional and international levels. Statistics court has already won - despite its three pillars (statistics, law and sociology)-originality and has become full as the independent scientific discipline. Judicial statistics is part of the grouping of Social Statistics and the implementation of statistical methods to those social phenomena within the scope of the provisions of substantive law and procedural law. A short story about the birth of statistics before criminal oriented toward the study of regularity found in mechanisms criminal, the process of forming the statistics law, and those who are considered the founders of the statistics of crime are treated in the first half of this paper. A special attention in this essay take the uses of criminal justice statistics. They are divided into three interdependent areas: administration, planning, research and policy analysis. Each of them occupies a specific weight in this article. Author prohibits not only the definition and understanding of the judicial statistics which reserved a full exposition but also in the care shown for the purposes of a system of criminal justice statistics. In the final analysis, it sheds light on the practical importance of the study of statistics law related to improving the work of the police, prosecution and courts, as well as the importance of theoretical and scientific materials statistical give in illustration and justification of theses scientific law, in theoretical generalizations of these sciences etc. In this context, what I want to emphasize is that we should move towards the use of statistical data, so that the product to be released from the processing and study them, have influence in positive law.

Keywords: *judicial statistics, judicial administration, planning, criminal justice, policy analysis*
